

GTM Workflow Prioritization Matrix

How **dozens of manual RevOps & PMO processes** get mapped, scored, and sequenced into a 90-day automation roadmap, so the highest-leverage work ships first and nothing that touches money or comp gets automated by accident.

ANONYMIZED SAMPLE
Stephen Jang · RevOps
Scores illustrative
Tune to your org

Two independent reads on every candidate workflow. **Priority** decides the order it ships. **Exposure** decides how much the machine is allowed to do. It never changes the priority, only the posture.

STEP 1 · SCORE EACH WORKFLOW (1-5 PER AXIS)

01 · IMPACT

Impact

Revenue, margin, or velocity moved if this runs well

02 · VOLUME

Volume

How often it runs: frequency x people it touches

03 · TIME

Time drain

Manual hours it consumes across the team today

04 · FEAS

Feasibility

Data availability + how cleanly the logic maps to rules

Priority = Impact x Volume x Time x Feasibility · **Exposure** (money / comp / customer stakes) sets the automation posture separately

STEP 2 · RANK & ASSIGN A POSTURE

CANDIDATE WORKFLOW	IMP	VOL	TIME	FEAS	PRIORITY	EXPOSURE	POSTURE	WAVE
Renewal / churn-risk forecast	5	4	4	4	Top	Med	Assist	Now
Competitive deal flagging	4	4	3	4	Top	Low	Automate	Now
Bottom-of-funnel deal review	4	5	5	3	Top	Med	Assist	Next
Coaching prep for 1:1s	3	5	4	4	High	Low	Automate	Next
Contract clause lookup (Deal Desk)	4	3	4	3	High	Med	Assist	Next
Quote / discount approval routing	4	4	2	3	Med	High	Human-owned	Later
Comp / SPIFF calculation	3	2	3	3	Med	High	Human-owned	Later
QBR account summaries	3	3	4	4	High	Low	Automate	Later

Posture · Automate: system acts, human spot-checks · Assist: system drafts, human decides · Human-owned: system informs only

STEP 3 · SEQUENCE INTO 90 DAYS

DAYS 0-30

Foundation & quick wins

Wire the governance layer to the systems of record. Ship **1-2 low-exposure, top-priority** automations (competitive flagging, renewal risk) to prove the pattern.

DAYS 31-60

Highest-leverage

Attack the biggest **time-drain x volume** workflows (bottom-of-funnel review, coaching prep). Stand up the human-gate review loop.

DAYS 61-90

Scale & govern

Templatize so new workflows ship as **configuration, not rebuilds**. Formalize the audit trail. Keep money / comp / customer workflows human-owned.

THE GOVERNANCE RULE

Score sets the order. Exposure sets the posture. Anything touching money, comp, or a customer stays human-owned regardless of how high it scores. That single policy is what keeps the whole system auditable, and it's why reps and managers trust it enough to adopt it.
